

# System i LAN Console

10ZiG LAN Consoles provide reliable local and remote access to your iSeries. Experience the reliability of your old Twinax console with the added features and functions of today's technology. The 10ZiG LAN Consoles work in restricted mode as you would expect, enabling full management of the iSeries.

Use VNC or RDP to remotely access your iSeries; check system messages, check system status, access the iSeries remote control panel, and initiate backups from home. Access multiple 10ZiG Consoles on the same PC for control of multiple iSeries.

The 10ZiG iSeries LAN Console are based on our award-winning thin client products and are available in two versions:

Product includes logic unit and optical mouse only. 104 and 122 key keyboard and monitor sold separately.

## 6777es: System i LAN Console (Ethernet/Serial)

**iSeries Access** - IBM's 5250 emulation suite for access to your iSeries.

**Operations Console (Ops Con)** - allows you to use a local or remote PC to access and control your iSeries console and iSeries Remote Control Panel.
